

ZOOM!

Professional Chairside Whitening System

Photoreactive Drug Information

The following medications are commonly considered to be photoreactive and may cause an adverse condition if used in conjunction with the Zoom System. If you are currently taking any of these medications, please consult with your physician before going through the Zoom procedure. To check photoreactive properties of any medications not listed below, please consult the most recent edition of the Physician's Drug Reference (PDR). Please circle any medication below that you are taking. It is still possible to use the Professional Chairside Whitening System but without using the *ZOOM!* light to avoid any possible reactions.
